

## UMRA - Per Project Service Logging

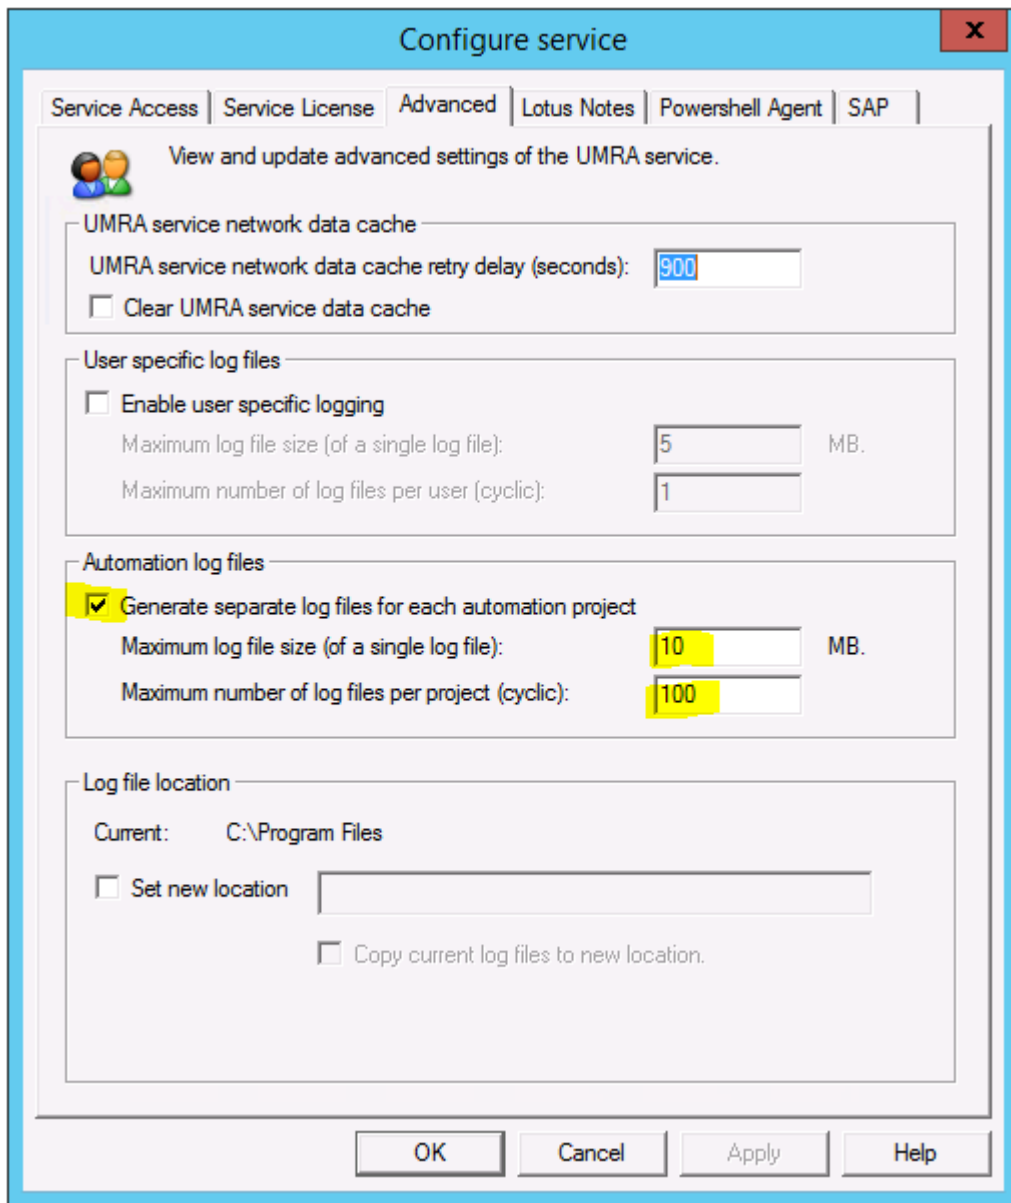

Kevin Lisowski - 2016-01-22 - UMRA

In order to increase the amount of data logged by the UMRA service, there are two areas that need to be modified. One affects the overall size of the log files, the other changes the service logs from a single stream of overwritten files to a rotating set by project name.

To make this change, first select 'UMRA Service' from the file bar then choose 'Service Properties' from the dropdown menu:

In the subsequent window, select 'Generate separate log files...' then specify the size of individual files (in MB) and the count of files to create before overwriting:

After that, restart the UMRA service and enjoy your larger, more specific service logs!
